

ARAUCARIA SUBULATA

Kingdom: Plantae

Order: Araucariales

Family: Araucariaceae.

Genes: Araucaria

Species: Conifer

Common Name: Narrow-leaf araucaria

Scientific Name: Araucaria subulata

Native Name: New Caledonia

Ideal Temperature: 18-24°C

Herb/ shrub/ Tree: Tree

Medicinal values:

Used to treat inflammation, respiratory problems, viral infections, ulcers, and rheumatoid, cardiovascular, and neurological disorders.

ABOUT THE PLANT :

The trees are magnificent evergreens, with apparently whorled branches and stiff, flattened, pointed leaves. In some species, the leaves are tightly overlapping, giving the branches a scaly appearance. The plants are usually dioecious, meaning that male and female cones are borne on separate individuals.
