

Epipremnum aureum

Kingdom:	<u>Plantae</u>
Clade:	<u>Tracheophytes</u>
Clade:	<u>Angiosperms</u>
Clade:	<u>Monocots</u>
Order:	<u>Alismatales</u>
Family:	<u>Araceae</u>
Genus:	<u>Epipremnum</u>

Golden Pothos (*Epipremnum aureum*), also known as Devil's Ivy, is a popular and easy-to-care-for houseplant. Here's some detailed information about it:

Appearance:

Leaves: Heart-shaped, glossy, and typically green with golden-yellow or white streaks or variegation.

Growth Habit: It is a vining plant that can grow long, trailing stems, making it great for hanging baskets or as a cascading plant in containers.

Light: Thrives in a range of lighting conditions from low to bright, indirect light. It prefers indirect light but can tolerate low light conditions, though its growth might slow down and variegation may be less pronounced.

Water: Allow the top inch or so of soil to dry out between waterings. Overwatering can lead to root rot, so it's better to err on the side of underwatering.
